Telia Company response to the Draft RSPG Opinion on ITU-R World Radiocommunication Conference 2023

Telia Company appreciates the opportunity to provide input to the consultation on the Draft RSPG Opinion on ITU-R World Radiocommunication Conference 2023 (WRC-23).

Sufficient spectrum availability in low, mid, and high spectrum bands with feasible conditions is crucial for ensuring the investments needed to provide high quality mobile broadband services for increasing society demands also in future. Agenda items 1.2, 1.3 and 1.5 have possibility to create regulatory clarity and support future EU and national decisions on ensuring efficient spectrum use with best socio-economic value. In addition, Article 21 and Agenda item 10 are of interest for Telia Company. Possible changes in relation to Article 21 should not lead to unnecessary restrictions for mobile networks in any of the bands used or planned for IMT. For WRC-27 Telia Company supports inclusion of an Agenda Item for studying additional spectrum for IMT for longer term demands (IMT-2030).

Telia Company has participated in developing ETNO and GSMA responses. In addition, we were involved in Multi-Company response focusing on the IMT identification of 6425-7125 MHz under Agenda Item 1.2. We support these replies and refer to them for further information.
