Dear ladies and gentlemen,

Bouygues Telecom would like to thank RSPG to give European radiocommunication's actors the possibility to express their views about this important topic. In fact, the definition of European priorities is an important step in the preparation of WRC, and will result in a great European efficiency.

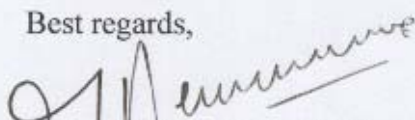

As a 2G/3G mobile operator, we share the views of the European Commission on IMT2000 and systems beyond as a very important issue for WRC 07. For mobiles operators the major topics for WRC 07 are the frequency issues of IMT2000 and systems beyond (WRC07 Agenda Item 1.4), as well as the use of 2500-2690MHz band as the IMT2000 extension frequency band, which corresponds to agenda item 1.9 of WRC 07.

When we talk about IMT2000 systems issues for WRC 07, we associate it primarily to the availability in good conditions and due time of the 2.6GHz band, and if necessary, new frequency bands for systems beyond.

Bouygues Telecom would also like to highlight the importance of the availability and the protection of infrastructure radio relay links, when rolling out IMT2000 and systems beyond. One of the main frequency band used in this infrastructure network is the 18GHz, which is concerned by WRC agenda item 1.18.

We consider the 18GHz band as part of the overall deployment of IMT2000, and therefore propose to include a reference to AI 1.18 in the text related to EC interest on IMT2000 and systems beyond.

Best regards,

Jean-Philippe Desreumaux
(Director, Spectrum Policy)
