

Dear Gentlemen!

The Cable Television Association in Poland, the Chamber of Commerce, takes note of the proposed carrier frequencies and bandwidths for NR in 5G technology. We would like to point out that the power of transmitters for wireless cable TV at the frequencies proposed for cells should protect such SNR so that, with appropriate QAM modulation, such channel widths can be secured in bps for 4K signal transmission.

Yours faithfully,  
deputy chairman  
Andrzej Rychlik, PhD
